SITE CASE STUDY

TrueBlue Clinical Research: one place for site training

How a Tampa research site replaced a worksheet and a handful of websites with one training record.

THE CHALLENGE

Before CRLN, onboarding at TrueBlue was fragmented. New team members worked from an onboarding worksheet and had to visit several websites to complete their training, some of which charged fees.

WHY TRUEBLUE CHOSE CRLN

After a demo, TrueBlue saw CRLN as an excellent fit for both new team members and the existing team's ongoing clinical research training.

HOW THE TEAM USES IT

New hires create an account and complete their required GCP and human subjects protection training, which covers HIPAA in research, during their first week. Every CRC completes the Clinical Research Training modules at hire and repeats them every three years.

WHAT CHANGED

CRLN tracks completion and due dates for everyone on the team, so training is assigned, completed and tracked in one place.

> **"Training is easy to assign, complete, and track, which gives me peace of mind and improves our operational efficiency."**
>
> Jeffrey Smyth, MS, CCRP, President and Executive Director, TrueBlue Clinical Research

> **Advice for other site directors: "I would recommend it. Training is simple to assign and track, and the CRLN team is accommodating, helpful, and professional."**

Free for sites
Training, records and scored practice at no cost to the site.

First week
New hires finish required training in their first week.

One record
Completion and due dates for the whole team in one place.
